An ATV, also known as an All Terrain Vehicle, is a motorized vehicle that is a bit similar to a motorcycle but has four wheels. It is mostly used on rough terrain and as the name implies, it is designed to get through any type of terrain. It is called the quad bike in other countries and this is used worldwide for a variety of purposes such as delivery, transportation and of course, rally racing.

The Dakar rally is the most famous rally race for this kind of vehicle. For the people who attend and join these kinds of races, they will all tell you that the key to win is not just speed, rather it needs a good balance of everything which includes the ability to effectively slow down your machine in turns or other obstacles which you need less speed to get through perfectly. This ability is provided by the braking system, and a crucial part of this system is the ATV brake pad. You need to insure that this pad is reliable and perform the way it should so that when it comes right down to it, you know you can trust your brakes. To do this, you can replace your current pad with an EBC ATV brake pad.

Brake pads from EBC are some of the best in the business. For ATVs, they mainly have two different types of brake pad. The first is the Sintered ATV brake pad. It is a great pad which:

- Performs very well both in cold and heated friction.
- Very durable and built to last a very long time with the use of copper metal alloy.
- Resistant to most things such as dirt, mud, sand, water and grit to insure you that it will perform as expected even after going through so much abuse.
- Offers reduced damage to your disc.

The other type is known as the EBC Moto-X ATV brake pad.

- Choice of top moto-x and enduro racers.
- Makes use of the proven graphite formula.
- Can also perform very well in both cold friction and hot friction.
- It provides reduced levels of damage to the disc.
- It also has a very low heat transfer.
- Good durability and longer life span.

When it comes to manufacturing brakes and parts of the brake system, EBC can provide some of the best in the business. But not only that, they also provide DVDs regarding braking systems to inform their customers how this system works and also, how to replace the parts of their brakes on their own.

When you need to replace your brake pad, always remember that EBC can always help you find the best performance ATV brake pad. They have been the choice of many which includes some of the top riders in the world. This is a testament to how well these products perform and you too will rest assure that it will deliver when you need it the most.
