Kart racing is has become a very popular sport both in the United Kingdom and the United States. It is fast, accelerating and exciting, just the way any racing sport should be. These small machines vary from speed, the fastest karts of today can now exceed 160 miles per hour. But most of all, kart racing is also very fun to join in. But the fun in this racing sport can stop just as fast as it begins if you aren't careful about your machine and constantly check everything including your brake pads. It is vital to once in a while, replace your kart brake pad. With that amount of speed on a race track, you should be able to trust your braking system when it comes right down to the line.

Brake pads form a vital part of the whole braking system because this is responsible for the actual stopping. A disk is connected to the wheels of the kart and the pads squeeze this disk in order to slow down and stop the machine. If the pad is worn out, then it will not perform as expected and may lead to an accident. This can all be avoided by constantly checking the pad and, if necessary, replacing it with an EBC kart brake pads.

EBC is a leading manufacturer of braking systems. They have a wide variety of kart brake pads in order to replace the one you have right now. Each type of pad has its own specialization. The EBC Red brake pads are for general use, benefits are

- Made of semi metallic compound which produces medium friction.
- Best for non professional karts.
- It is built to last longer than other kart brake pad.
- Used mostly on rental karts.

The Green brake pads on the other hand,

- Has a higher friction level than the Red brake pad and is made out of softer, stickier material.
- It may have a shorter life time than the Red variation but it can perform better in racing.
- Has a friction level around 0.45.

Lastly, the Gold kart brake pad.

- Makes use of copper alloy that is manufactured in the United States in order to achieve long lasting performance.
- Has a very high friction level of 0.6
- It lasts very long and has a high friction level which makes it perfect for endurance racing as you can rest assure that it will not bed anytime soon.

When it comes to kart racing, or any other type of racing for that matter, it is important that you can rely on your kart brake pads. This will insure your safety, the safety of the people around you and of course, it will insure you high quality performance so you can improve your odds of winning the race. With the different types of brake pads EBC has to offer, all you have to do is simply choose one which will suite your situation and you can be sure that you will get the highest grade performance possible.
